## SUMMARY

---

Hi! I'm an aspiring Android mobile developer with a little over a year of experience in this field. During this time I managed to work in a small startup and implement several projects of my own. I enjoy the whole development process - from creating an idea to implementing a finished product. Despite the fact that my professional activity has not previously been connected with the development of mobile applications, I already feel that this sector of IT has become my vocation, and I am ready to move in this direction.

## WORK EXPERIENCE

---

### Junior

Oct 2023 - present

Development of a mobile dating application.

## PROJECTS

---

### Online Shop App

[Link to project](#)

A multi-modular mobile app for browsing products from an online shop. UI is made on Jetpack Compose. Room is used to cache items and simulate saving/deleting to basket or favourites. The application uses: Hilt for dependency injection, Retrofit for networking, Coil for image uploading, Kotlin Coroutines + Flow for asynchronous operations. The architecture of the application is centred on MVI and Clean Architecture principles.

### News App

[Link to project](#)

An Android mobile app that displays a list of recent listings from Bybit's API.

### Drones App

[Link to project](#)

One of my very first applications. UI is written in Jetpack Compose. It uses Dagger2 for dependency injection. In the app you can add/edit and view drone information. Firebase is used to synchronise between devices and save their images.

## EDUCATION

---

2021 - 2025 Bachelor at **Moscow Aviation Institute**

Process Engineer

## ADDITIONAL EDUCATION

---

Android Academy Fundamentals Course

Android Academy Advanced Course

Yandex Mobile Development School

JetBrains Kotlin Course

## SKILLS

---

Android Skills Kotlin, Android SDK, Jetpack Compose, XML-View, Kotlin Coroutines, Kotlin Flow, Dagger2, Dagger Hilt, Room, Retrofit, Coil, WebView, Firebase, LiveData

Another Skills Algoritms and Data Structures, GIT, SOLID, DRY, YAGNY, KISS, GoF
